

The Conflict Confronts' Final event will be a four rounds event. In each round, half of the participants will be selected for the next round. Note that extensive scientific knowledge is not necessary for participating in the event – even knowledge up to 10th Grade is enough.

1. Round 1:

There will be 32 participants, divided into 8 groups of 4 each and each group will be given a speech or press release related to a scientific discovery or invention or achievement. The participants will have to summarize it, bringing out the key points and expressing them in their own words.

Judgement will be made based on whether all the key points are covered, the conciseness of the summarization, fluency in speech, etc. The top 2 participants from each group will be selected for the next round.

2. Round 2:

It will be a problem solving round in which the selected 16 participants will be divided into 4 groups and each group will be given a real world problem. Participants will have to suggest model solutions that can be implemented practically based on scientific data and facts. Keeping in mind the possibility of non-scientific background participants, personal assistance with scientific data will be provided by the Conflict Confronts Team and/or reputed professor(s) if possible.

Judgement will be made based on the practical implacability of the suggested solutions. The top 2 participants from each group will be selected for the next round.

3. Round 3 & 4:

Both these rounds will be debates. In these rounds, topics will be given to the participants; 2 participants will speak in favour of and 2 will speak against the opinion of the topic given to them. Topics will be related to the problems faced by the scientific community and in academia.

Judgement will favour the one who is better of the two speaking in favour of and against, i.e., 1 each from either side.

If any changes are made in the above structure of the event, the participants will be informed timely.
